## Subject Index

AC superconductors
  small-scale experiments on static devices using, 149
Automatic testing
  and state estimation, supervisory control and data acquisition (SCADA) reliability and availability improvement with use of, 71

Compensation
  of extra high voltage transmission lines, contribution to, 113
Compensators
  dynamic output feedback, power system stability improvement using, 37
  static VAR, balancing of unbalanced loads using, 137
Control
  of power systems, feasibility study for development of expert systems for, 125
  real-time, of system voltages and reactive power, efficient technique for, 197
Controller design
  optimal, in high-order power systems, model reduction technique suitable for, 51
Converter
  thyristor controlled thermoelectric, improvement of power system transient stability by, 227

Demand-side programs
  of utilities, planning: data and analytical needs, 105
Digital simulation
  space-phasor model of three-phase induction motor with view to, 157
Dispatch
  real-time economic, fast base-case approach to, 167
Distribution factor sorting
  identifying retained portion of equivalent network using, 93
Distribution systems
  effects of voltage reduction on, 191
Dynamic output feedback compensators
  power system stability improvement using, 37

Environmental constraint
  and system reliability, fast scheduling method for power system operation considering, 235
Equivalent network
  identifying retained portion of, using distribution factor sorting, 93
Expert systems
  for power system control, feasibility study for development of, 125

Feedback compensators
  dynamic output, power system stability improvement using, 37

Galloping transmission lines
  modal dynamics and stabilizer design for, 175
Generating capacity
  electric, planning of, non-linear programming approach to, 1
Generation margin
  optimal allocation of, to cope with expected line overloads, 27

Induction motor
  three-phase, space-phasor model of, with view to digital simulation, 157
Interconnected power systems
  load supplying capability of: a probabilistic approach, 183

Line overloads
  expected, optimal generation margin to cope with, 27
Load flow problem
  operations-oriented formulation and solution to, 11
Load supplying capability
  of interconnected power systems: a probabilistic approach, 183

Modal dynamics
  and stabilizer design for galloping transmission lines, 175
Multi-machine power systems
  stability assessment of, using multi-variable frequency response methods, 209

Non-linear programming
  in electric generating capacity planning, 1
  in power system state estimation, application of, 41

Overloads
  of lines, expected, optimal generation margin to cope with, 27

Power frequency transformers
  equivalent circuit parameters for, 131
Power system(s)
  control of, feasibility study for development of expert systems for, 125
  fast scheduling method for operation of, considering environmental constraint and system reliability, 235
  interconnected, load supplying capability of: probabilistic approach, 183
  multi-line underground, surge protection with metal oxide (ZnO) surge arresters in, 19
  multi-machine, stability assessment of, using multi-variable frequency response methods, 209
  stability improvement of, using dynamic output feedback compensators, 37

© Elsevier Sequoia/Printed in The Netherlands

state estimation of, application of non-linear programming in, 41
transient stability improvement of, by thyristor controlled thermoelectric converter, 227
well-conditioned and ill-conditioned, integral state estimation for, 219
Power transmission systems
VAR-compensated, assessment of critical voltage and load margins in, 63
Probabilistic approach
to load supplying capability of interconnected power systems, 183

Reactive power
and system voltages, efficient technique for real-time control of, 197
Real-time control
of system voltages and reactive power, efficient technique for, 197
Real-time economic dispatch
fast base-case approach, 167
Reliability
of system and environmental constraint, fast scheduling method for power system operation considering, 235

Scheduling method
fast, for power system operation considering environmental constraint and system reliability, 235
Space-phasor model
of three-phase induction motor with view to digital simulation, 157
Stability
of multi-machine power systems, assessment of, using multi-variable frequency response methods, 209
of power systems, improvement of, using dynamic output feedback compensators, 37
transient, of power system, improvement of, by thyristor controlled thermoelectric converter, 227
Stabilizer design
and modal dynamics for galloping transmission lines, 175
State estimation
and automatic testing, supervisory control and data acquisition (SCADA) reliability and availability improvement with use of, 71
integral, for well-conditioned and ill-conditioned power systems, 219
of power systems, application of non-linear programming in, 41
State variable evaluation
adjoint network sensitivity based, for large-scale contingency events, 83
Static VAR compensators
balancing of unbalanced loads using, 137
Superconductors
AC, small-scale experiments on static devices using, 149
Supervisory control and data acquisition
(SCADA) reliability and availability improvement when state estimation and automatic testing are used, 71
Surge protection
with metal oxide (ZnO) surge arresters in multi-line underground power syste.ms, 19

Thermoelectric converter
thyristor controlled, improvement of power system transient stability by, 227
Transformers
power frequency, equivalent circuit parameters for, 131
Transmission lines
extra high voltage, contribution to compensation of, 113
galloping, modal dynamics and stabilizer design for, 175

Unbalanced loads
balancing of, using static VAR compensators, 137
Underground power systems
multi-line, surge protection with metal oxide (ZnO) surge arresters in, 19

VAR-compensated power transmission systems
assessment of critical voltage and load margin in, 63
VAR compensators
static, balancing of unbalanced loads using, 137
Voltage(s)
system, and reactive power, efficient technique for real-time control of, 197
Voltage reduction
effects of, on distribution systems, 191
